Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 6 is rejected under 35 U.S.C. 102(e) as being anticipated by Burgess et al (20030114853).

With respect to claim 6, Burgess et al disclose a rod connector (66) comprising a connector main body (76) swingably attached to a shank (68), the connector main body comprising a recess configured to engage part of a spherical end portion (72) of the shank, part of the spherical end portion extending outside of the recess in a direction towards the shank; as best seen in FIG.5 a rod supporting portion, as best seen in FIG.5, provided in the connector main body and configured for supporting a rod (12); as best seen in the FIGURES; and a pressure fixing device (34) for pressure fixing the rod to the rod supporting portion of the connector main body; as best seen in the FIGS; wherein a rear end of the of the shank comprises a flange portion, as best seen at 68 or 70 or 90). Furthermore, the manner in which the flange is intended to be employed does not differentiate the claimed apparatus from the prior art apparatus satisfying the claimed structural limitations. Ex parte Masham 2 USPQ2d 1647 (1987).

Claim Rejections - 35 USC § 103

Art Unit: 3733

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Burgess et al. (20030114853) in view of Jackson et al. (5,716,355).

With respect to claim 4, it is noted that Burgess et al teach all the limitations, except for the rod supporting portion comprising a rough surface, as claimed by applicant. However, in a similar art, Jackson et al evidences the use of a rod supporting portion having rough surface (teeth) to grip and secure the rod connector upon tightening.

Therefore, given the teaching of Jackson et al, it would have been obvious to one having ordinary skill in the art, at the time the invention was made to modify the rod securing portion of Burgess et al; as taught by Jackson et al to grip and secure the rod connector upon tightening.

Response to Amendment

Applicant's arguments, see Remark, filed 2/13/06, with respect to the rejection(s) of claim(s) 1-4, 6 under 102/103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Burgess et al/Jackson et al.

Furthermore, the final rejection of the claims in the last Office Action is withdrawn.
